## Free international calls app ltd

A reporter's cold-blooded call is a cardinal sin, and yet it remains so widespread that some reporters never answer the phone when it rings. Why? They know what many appreciate: Phone calls are a huge waste of time. It never takes a few minutes to quickly pass everything on the phone. Collaboration - discussing documents, updating the status of a project or signing up in general - over the phone is an insult to our valuable time. We all know this, so why doesn't anyone call a vicious circle of conference calls? The problem is that engaging in a phone call looks a lot more interesting (and the caller seems to work harder) than tingling off the keyboard. A guy involved in a headset who says all the right things are infinitely more impressive than the one that coughed up on his computer, right? Wrong in my experience, it is much more likely that a PR person jumping between phone calls will be an inefficient time than the one who focuses on his computer. It's much easier to look busy on your phone, and it's a great way to go through your day. I've been on the phone all day, you can tell your co-workers and spouse. How busy you are! How important you must be! Who cares if you do something, right? You were on the phone. No matter how it may seem, PR isn't about being loud or being busy. To quote one of my more successful clients, I don't care if you work an hour a month if you're getting results. Love him or hate him, Tim Ferris's four-hour workweek doctrine is sound: the real winner is someone who does great things, and that doesn't require you to work twelve, eight or even four-hour weekdays. Or weeks. The phone is the least effective tool in my industry - and many more. Here are some suggestions on how to do it (better) without it.1. Document CollaborationGoogle Docs is Occam's razor of communication. It can and will solve all the cooperation problems you have. Do you want to work on the committee's release? Put everyone in the same document. Edit in order - everyone gets to go. We'll agree on the leader of the team that gets the last word. Never jump on the phone to discuss it. If you can't communicate your thoughts in Google Docs comments, you're having trouble using human words, or you might think your time is more valuable than others' time. In any case, you have problems that the phone call cannot resolve.2. Internal team communication Would you want to discuss something like an agency or a group? Yammer is great for asynchronous internal social networks, sharing ideas and spreading an article. Campfire is a simple real-time 37signals chat tool - good for all back and forth that's too complex for Google's built-in INSTANT messages. You can even create attachments and split teams into different rooms into separate themes and accounts.3. Pitching on the phone, or pitch email with callinstry tradition says it's a good idea to watch any pitch with your phone person it's not. To remove any uncertainty, I asked some reporters -- you know, people who are cold-blooded -- about their thoughts on unsolicited calls:Journalists often don't respond to email pitches because they either don't have enough time, or the story is a bad match. Calling them to monitor the situation only makes the situation worse - Andrew Nusca, senior editor of Fortune magazine. His voicemail (created out of necessity, says Nusca) even deals with the idea of what to do if you want to track an email: If you sent me an email, send me another one. Oh my God, [expletive] all about it. - Chris Velazco, TechCrunch reporter Don't call us. We'll call you. - Kyle Orland, senior game editor at ArsTechnica Worst Thing, WORST THING. - Ben Kuchera, editor of POLYGONNIKYD. Never. Never. Never. Daniel Bader, senior editor at MobileSyrup and Betakid4. For people to justify their calls (and their calendars)I'm seem brutal, but if you see that a team member has a lot of calls, find out why. Ask you to sit on them and tell them if you think it's a good use of their time. It's very easy to spend a lot of time back and forth with fun ideas on the phone, but the question is whether it brings any results for the business. If the basic purpose of the call is to make the client or PR person feel intelligent, then this is a waste of time before it begins. NEW YORK, NY / ACCESSWIRE / November 11, 2015 2020 / Points International Ltd. (TSX:PTS) will discuss its earnings results in their 2020 Third Quarter Earnings Call will take place on November 11, 2020 at 16:30 Eastern Time. SOURCE: Investor NetworkView source version on accesswire.com: ability of members of the U.S. Congress to buy and sell shares has been controversial over the years. One of its most prominent members made several purchases in December that could benefit the new Biden administration. What happened: Over the weekend, it was revealed that House Speaker and California Rep. Nancy Pelosi had bought 25 tesla Inc (NASDAQ: TSLA) call options. The purchases could have been made by Pelosi or her Paul, Paul, operates a venture capital firm. The options were purchased at a deposit price of \$500 and expired on March 18, 2015. Pelosi paid between \$500,000 and \$1,000,000 for options, according to the disclosure. Pelosi also revealed that she bought 20,000 shares of AllianceBernstein Holdings (NYSE: AB), 100 calls from Apple Inc (NASDAQ: AAPL) and 100 calls from Walt Disney Co (NYSE: DIS). Tesla shares rose to more than \$890 today from \$640.34 at the time the calls were purchased. Call options were valued at \$1.12 million as of Monday. Related article: How the 2020 presidential election could affect ev, car stock Why it's important: Pelosi's purchases are questionable because they could argue that companies benefit from new President Joe Biden's agenda: Biden's push for electric vehicles, which could include lifting the sales cap, would give buyers of Tesla's credits a possible cash-for-clunkers program that could encourage customers to trade used vehicles toward buying an electric vehicle. Pelosi could now have a conflict because she's working on a clean energy initiative that could benefit her family. Former U.S. Senator David Perdue, a Republican, has been criticized for doing a lot of business during his six years in Congress. Perdue was the most prominent stock trader in Congress, serving 2,596 trades during his time in office. Some of Perdue's transactions came when he was a member of several subcommittees. The Justice Department investigated Perdue and found no wrongdoing. What's next: It's legal for members of Congress and their spouses to own shares. Transactions must be disclosed under the Stop trading on Congressional Knowledge Act, which was enacted in 2012. U.S. Senator Jeff Merkley of Oregon is one of the members of Congress who co-drafted legislation banning the addition of individual accounts by members of Congress. Both Merkley and Pelosi are Democrats. Pelosi's deal could push for more regulations on the purchase of shares by members of Congress. (Photo: Official photo of the U.S. Embassy by Archibald Sackey and Courage Ahiati.) More information about BenzingaClick can be found here for options stores from BenzingaCharging Infrastructure SPAC Plays: Is EVGo the best of the bunch? The momentum, which appears to have contributed to the brief squeeze on the stocks of video game retailer GameStop Corp., also appears to be affecting the shares of many other heavily short-circuited companies. Deutschland, Leben? Nutzen Sie diese Gelegenheit High-priced shares are being targeted by some investors who are trying to force people to bet that prices fall under cover. Watch Dillard's and AMC Entertainment.Goldman Sachs sound the alarm very hot technological events. (Bloomberg) -- Michael Burry's Burry's attitude to GameStop Corp. in 2019 helped lay the foundations for one of the biggest craziness investors in recent memory. Now the famed fund manager is warning that gamestop's manic gathering has gotten out of hand. If you SCME're on the radar and you've done well, I'm really happy for you. Burry, who is best known for his prescient bet on mortgage securities before the 2008 financial crisis, said in a tweet on Tuesday. However, what is happening now should have legal and regulatory implications. It's unnatural, crazy and dangerous. Read more: How WallStreetBets pushed GameStop shares on MoonBury are neither long nor short GameStop, he said in a brief email response to Bloomberg questions on Tuesday. His investment firm has held a 2.4 per cent stake since September. 30 after pairing its shares in the third quarter, according to regulatory filings compiled by Bloomberg.Burry, which became the household name after its mortgage deal was listed in the Big Short, helped draw attention to GameStop as early as mid-2019, when its Scion Asset Management revealed a 3.3 percent stake in the beleaguered video-game retailer and urged the company to buy back the stock. His position was cited by some traders, who have flooded online forums in recent weeks with posts urging their colleagues to buy them. GameStop's 642% increase since January 12, plus another 41% rise in afternoon trading on Tuesday, captivated Wall Street, drew a tweet from Elon Musk and stymied short sellers including Gabe Plotkin Melvin Capital and Andrew Left Citron Research. It has also prompted calls for an investigation by the Securities and Exchange Commission, although experts say it is difficult to prove that donations in the chat room are in part of an illegal market manipulation system. (Updates with Burry comment in the third paragraph.) For more articles like this, visit us at bloomberg.comPrestite now to stay ahead with the most trusted source of business news.©2021 Bloomberg L.P.The world is ready for a new change. Markets will soar as Shares ofGameStop (GME) gained another 92% today, closing at a record \$147.98 apiece in another show-filled clash between Reddit WallStreetBets and short sellers. The company's market cap is now more than \$10 billion. Investor's Business DailyGameStop kept rising in Elon Musk's tweet. Microsoft jumped late on earnings, while AMD and Palantir fell on the news. Leading events struggled on Tuesday. Regulators have suspended the tech giant's planned listings before ordering a shake-up at the firm. The second revolution is taking off around the worldThe EVgo has become the latest charging infrastructure company to announce an SPAC deal that will be publicly available at a time when electric vehicles and infrastructure are rapidly being adopted. About EVgo. Climate Change Crisis Real Impact Acquisition Corp (NYSE: CLI) brings EVgo to the public with a deal that values the company at \$2.1 billion.EVgo has more than 800 seats for its fast charging stations in 34 states, starting 67 major metropolitan markets. The company has supported more than 220,000 customers. EVgo has the largest public DCFC network (fast DC CHARGING). The company is a partner of General Motors Company (NYSE: GM), Tesla Inc (NASDAQ: TSLA), Nissan, Lyft Inc (NASDAQ: LYFT) and Uber Technologies Inc (NYSE: UBER). Charging stations are hosted in retail stores such as Albertsons, Wawa and Kroger (NYSE: KR). DCFC is the key that distinguishes EVgo from its competitors. DCFC accounts for only 5% of the market in 2019 and is expected to grow to 40% by 2040. EVgo has 818 DCFC locations and 1,412 charging units. Related article: 7 current and former SPAC users that could be in 2020 are playing competitors: EVgo is the only charging partner that deals with multiple OEMs in networking. The deal with General Motors will allow the company to add more than 2,700 additional fast charging points. EVgo also has an agreement with Nissan that provides \$250 charging credits to customers. The company is also the first charging network with integrated Tesla connectors. In the future, more than 770 connectors are added to chargers to help Tesla customers. Blink Charging (NASDAQ: BLNK), Electrify America, owned by Volkswagen (OTC: VWAGY) and ChargePoint, which is associated with SPAC Switchback Energy Acquisition Corp (NYSE: SBE), compete in the EVgo electric vehicle charging market. EVBox Group, which will go public with SPAC TPG Pace Beneficial Finance Corp (NYSE: TPGY), could also soon be a competitor as it seeks to enter the U.S. market. Both ChargePoint and EVBox have hundreds of thousands of charging stations. EVgo is a leader in DCFC, which tracks only Tesla by the number of seats with fast charging stations. Chargepoint had 731 branches as of June. Electrify America 438 and Blink was part of a combined group that had 140 DCFC. One significant difference between competitors is EVgo's area of interest. Despite its lead in dc seats, EVgo has fewer connections than its rivals, averaging 1.7 per seat. EVgo has a total of 1,338 points for Electrify America 1,807 and ChargePoint 1,614. The industry average was 3.8 connections per charging location. EVgo is working to expand the number of connections to the site in the future with future spots with four, six or eight charging connectors. EVgo also boasts a 98% uptime rating. Customer satisfaction scores reflect uptime with an EVgo score of 8.5 out of 10 for customer satisfaction, compared to 8.0 for Electrify America, 7.6 for ChargePoint and 7.0 for Blink Charging. Benzinga's Take: There could be room to build a few more supplies of charging infrastructure to further roll out thousands more stations promised by President Joe Biden. ChargePoint looks like it could be a big winner with a large number of stations and a lead in the total number of DCFC connectors. EVgo could be a winner as it works with partners like GM and Tesla to roll out more DCFC and add Tesla connectors for the future. Share Performance: CLI shares have more than doubled since the deal was announced. Switchback's shares have risen nearly 300% in the past year. Blink Charging shares have risen more than 2,000% in the past year. More information from BenzingaClick can be found here for options stores from BenzingaPalantirPaltia Announces New Climate Investments PIPE: Who Could It Be?© 2021 Benzinga.com. Benzinga does not provide investment advice. All rights reserved. Business Investor DailyPlug Power on Tuesday raised guidance for 2021 and a key target for 2024 and announced a \$1.5 billion secondary share offer after it closed. For investors looking for a strong dividend player, there are some market segments that are known for their high-yield dividends, making them logical places to start looking for reliable payers. One of them is the hydrocarbon sector, the extraction of oil and gas and gender mainstreaming. This sector deals with products that are essential – our world is running on oil and its products. And while overheads for energy companies are high, they still have a market for their results, leading to prepared cash flow - which can be used to pay dividends, among other things. All this has investment firm Raymond James looking on the oil and gas listing for dividend stocks with growth potential. We expect the [midstream] group to add about 1 percent of its average EV/EBITDA multiple this year. That equates to a ~20-25% shift in equity value, noted Raymond James analyst Justin Jenkins. Jenkins outlined a series of points leading up to the mid-century recovery in 2021, which include the transition from lockdown to reopening policies, a general impetus on the road for commodity price increases, the political point of view in favour of an anti-inflation policy, a green new agreement, and finally, what relatively low stock values, dividend yields are high. A look at the TipRanks database reveals two mid-range companies that have come to Raymond James' attention - for all the points listed above. These are shares with a specific set of clear attributes: a dividend yield of 7% or more and a purchase rating. MPLX LP (MPLX) MPLX, which was fired eight years ago by Marathon Petroleum as a standalone midstream entity, acquires, owns and operates a range of midstream assets, including pipelines, terminals, refineries and river shipping. The main areas of activity of the MPLX are in the northern Rocky Mountains and the Midwest and stretch south to the coast of the Gulf of Mexico. The 2020 corona revenue reports show the value potential of oil and gas extraction. The company reported \$2.18 billion in frontline earnings in the first quarter, but were positive in both subsequent quarters. The Q3 report also showed 1.2 dollars in net cash, which is more than enough to cover the distribution of the company's dividends. MPLX pays out 68.75 cents per share quarterly or \$2.75 per annum, giving the dividend a high yield of 11.9 per cent. The company has a diversified set of mid-stream operations and strong cash production, factors leading to Raymond James' Justin Jenkins tweaking its stance on MPLX from Neutral to Outperform (i.e. Buy). His price target, at \$28, means a 22% one-year increase in shares. (To see Jenkins' results, click here) In support of his stance, Jenkins writes: Given the number of boxes the story can check for MPLX, it's no surprise that it was a debate. With exposure to the inflating G&P trend, the expected softening/refined recovery of product volumes, the story hits many operating boxes... while spreading out in several financial discussions... We also believe that solid financial results for 2020 should provide long-term confidence... Now that we're turning to the rest of the street, other analysts seem to be generally on the same page. With 6 purchases and 2 holders allocated in the last three months, the consensus assessment comes as a strong purchase. In addition, the average price target of \$26.71 gives an increase to ~17%. (See MPLX inventory analysis on TipRanks) DCP Midstream Partners (DCP), based in Denver, Colorado, another stockpile is one of the largest natural gas operators in the country. DCP manages a network of pipelines, nodes, storage facilities and facilities stretching between the Rocky Mountain, Midcontinent and Permian Basin production areas and the Gulf of Texas and Louisiana coasts. The company is also active in the oil and gas sector. In the last reported quarter – 3Q20 – DCP collected and processed 4.5 billion cubic feet of gas per day along with 375 thousand barrels of natural gas liquids. The company also reported \$268 million in net money generated, of which \$130 million was free cash flow. The company reduced its debt burden by \$156 million in the quarter and reported a profit. The company's year-on-year decrease in operating costs. All of this allowed DCP to maintain a dividend of 39 cents per share. At the beginning of the corona crisis, the company had to reduce this payment – but only once. The recently declared dividend of 4Q20 is the fourth in a row with 39 cents per share. The annual rate of \$1.56 provides a respectable yield of 7.8%. This is another action that gets an upgrade from Raymond James. Analyst James Weston is referring to these shares from Neutral to Outperform (i.e. Buy) while setting a target price of \$24, which means 20% growth over a one-year time horizon. We expect DCP to publish another solid quarter on gradual improvement in NGL prices, NGL market volatility and positive trends in the early stages... let us not interest current propane prices and expect a solid but more normalised price regime in the next 12 to 18 months. In our view, this will create a favourable operating environment for DCP's cash flows, which is not currently reflected in street estimates. Weston noted. All in all, consensus assessment Moderate Buy on DCP is based on 7 recent reviews, reviews, down 4 to 3 Buy versus Hold. The stock is priced at \$19.58 and the average target of \$23 indicates an increase of ~15% from that level. (See DCP inventory analysis on TipRanks) To find good ideas for trading dividends at attractive valuations, visit TipRanks' Best Stock to Buy, a newly adopted tool that unites all TipRanks stock reports. Disclaimer: The views expressed in this article are solely those of the analysts mentioned above. Content is for informational purposes only. Before making any investment, it is very important to do your own analysis. Researchers around the world are in awe of saying \$100 billion? And then some? Wall Street analysts did. The consensus sees Apple Inc (NASDAQ: AAPL) as a link to that rare corporate crowd that broke the \$100 billion quarterly revenue threshold when it opens its fiscal Q1 books on Wednesday. That, of course, is a record for AAPL, and could be helped by the festive sale of the new iPhone 12. But it's one of a series of tech highlights AAPL has achieved in a year - one the company has acknowledged has been shaken by adversity in many corners. Chief executive officer Luca Maestri said strong results in last quarter's report were driven by the unrivalled loyalty of our customers. This may or may not be true, when AAPL reports a profit, investors will also listen to how well AAPL plays the market share game. The trend of working from home, fueled by a pandemic, looks like it could be a game-changer for AAPL, according to Morningstar analysts who believe it has driven sales of iPads, desktops and laptops. Anything that could be overshadowed in fiscal Q1 sales of the iPhone 12 holiday, which is probably safe to say, will get its fair share of attention on Wednesday afternoon after the final bell. AAPL has always been an attention-getter when the earnings season rolls around, and now, with it sporting a \$2.34 trillion market cap and reaching new share prices highs, it looks like it's sure to take a place under the light of light, even if it's against a number of other high-profile tech stock results this week. Tesla Inc (NASDAQ: TSLA) and Facebook, Inc. (NASDAQ: FB) reported on the same afternoon. Wall Street analysts expect AAPL revenue to jump 12 percent year-on-year to about \$103 billion, according to FactSet. But some firms, such as Loop Ventures, are looking for much stronger numbers: up 19 percent to \$109.5 billion. In terms of earnings, Street reached a consensus of \$1.41 per share. Morgan Stanley (NYSE: MS) also forecasts earnings of \$108.2 billion and earnings per share of \$1.50 on the high side of consensus. Recent interviews suggest that investors expect Apple to release solid but not great December results for the quarter, Morgan Stanley analysts write in a recent report. We disagree and believe Apple is likely to report record quarterly revenue and earnings. In our opinion, the iPhone 12 was Apple Apple product over the past five years, they said. More on that later. However you look at it, the numbers look robust. The AAPL innovation machine stopped giving guidance last year – like many other companies unsure of the consequences of COVID-19 on their sale. In March, no one knew what the riotous effects of the pandemic might be or how long it might take. And we still don't know all this, but we've found that quantitative indicators by the city and the state, and the overall fear of being in public, push helped to move quickly on a number of fronts and are already gaining strength. The digital fix is expected to be a major driver of growth, and it seems that AAPL could be well placed to do so. While the iPhone 12 may get most of Wednesday's attention, it might not be the last you hear when CEO Tim Cook set his records for Mac and services. Although he did not offer guidance in the past quarter, he suggested double-digit profits across all product categories except the iPhone 12, which he thought would achieve single-digit gains. FIGURE 1: THE APPLE LEAVES THE INDEX IN THE DUST. Over the past year, Apple shares (AAPL) have easily outperformed the Nasdaq-100 index (NDX). Apple shares quickly started in 2021, with investors apparently excited about tomorrow's 1st century profit outlook. Data source: Nasdaq. Chart source: Thinkorswim® platform from TD Ameritrade. For illustrative purposes only. Past performance does not guarantee future results. The iPhone 5G Launch Despite all the happy talk about AAPL fiscal revenue, weaker-than-expected iPhone sales offset the glee and pulled shares down nearly 6% in the first days after the October earnings release. They have since recovered. AAPL reported iPhone sales of \$26.4 billion in fiscal fourth quarter, below the \$27.73 billion expected by Street. Much of this shortfall has been attributed to AAPL's decision to push the launch of the iPhone 12 into this latest quarter, which many believe may have led to consumers waiting for innovation before they bought. At the time, some analysts said the switch to 5G could end up as a tailwind for the iPhone 12, with sales promotions and subscription packages. This, combined with an important holiday shopping season that will soon begin, could lead to a quick start to the new phone. Let's see if they were right. Analysts are mostly bullish about their iPhone sales expectations, with some saying the delay could push around \$4 billion in iPhone sales by the December quarter from fiscal Q3. Street consensus was last at \$59.58 billion, an increase of more than 6% year-on-year. But Loop Ventures thinks it's conservative. In a year-on-year comparison, sales are up 16% to \$64.9 billion, representing 59% of total sales, compared with a typical 50% of iPhone sales. It's unclear if that will indeed be the case, but if it does, it would reverse the trend in recent years towards iPhones being lower from revenues of AAPL. Company management emphasised the growth of services. Remember, we're only two years away from January 2019, when Cook set up most of Wednesday's attention on the new iPhone 12. The company's revenue is rising and spring weather is in just a few months, automakers are predicting increased demand - and expect strong year-on-year gains for 2021 when they take on depressed sales in the corona of the year. Against this backdrop, J.P. Morgan is pounding the table mainly for two car stocks, noting that each could shed at least 20% in advance. We checked them through the TipRanks database to see what other Wall analysts are saying. Ford Motor (F) Ford Motor is the smallest of detroit's Big Three. Ford, however, boasts a market cap of \$45 billion and shows that small is a relative concept. The company also boasts a loyal customer base and solid sales, building on Ford's F-Series pickup trucks. Ford's third-quarter revenue of \$37.5 billion reported sales due to losses due to corona losses of \$11420 million. This was the strongest quarter so far in 2020 and surpassed expectations by 13%. Net profit for the third quarter was \$2.34 billion, a year-on-year increase of 22%. Quarterly performance was boosted by a 35% share of the F-Series truck market in the U.S. market, a 22% increase in product deliveries to China and Ford Credit's best performance in 15 years. In recent months, however, Ford has taken a number of interventions. The company was forced to issue a pair of safety recalls on the North American market last November, on selected models of Taurus, Explorer, Edge and Lincoln Aviator vehicles. And earlier this month, Ford announced it would hit \$4.1 billion as a result of the closure of three manufacturing plants in Brazil. Analyst Ryan Brinkman, who is researching Ford for JPM, points to several factors that will support the stock. We find Ford's shares attractive given the valuation only roughly in line with history, despite many significant positives, including (1) a substantially restored lineup of vehicles, including new hot shows such as the Mach-E electric crossover Mustang, the new Ford Bronco (8gt;190K reservations), Bronco Sport and the upcoming F-150); (2) The renewed F-150 has historically led to a substantial improvement in north American profitability, which we expect by 2021; (3) Ford's bold moves are taking the right dimension to its international operations, including the last one in South America, we think will free up capital for use in initiatives that investors are likely to reward more than its electrification and autonomous efforts. Brinkman wrote. In line with his bullish comments, Brinkman has improved his stance on F, from neutral to overweight (ie Buy), and set a price target of \$14, which means a 25% increase for next year. (Click here to see Brinkman's results) Overall, Wall Street is leaning toward caution, where JPM is willing to take risks. The stock has 12 recent reviews, which are distinguished by 4 Buys, 7 Holds and 1 Sell. The shares sell for \$11.19 and the average price target of \$10.01 means an 11% drop from current levels. (See Ford's stock analysis of TipRanks) General Motors (GM) General Motors, best known for its initials, is the largest of Detroit automakers with a market cap of \$75 billion. The company has seen a 58% rise in shares in the past 12 months and is 210% higher than in March last year. GM's recent performance has impressed automotive observers. In the third quarter, the company reported \$35.5 billion, its best quarterly revenue four quarters, corresponding to its results of \$Q19. Income was \$4.4 or \$2.78 per share, a year-on-year jump of 74%. Results for the fourth quarter are due on March 10, 2015. The company outperformed its industry in the 4th and 5th U.S. Other strong models include the fully electric Chevy Bolt, whose sales have risen 26%, and the classic Chevy Corvette, which has seen sales rise by 20%. GM will also step up work with autonomous vehicles through cruise's division. In January, the company debuted Cruise Origin, a production model for a driverless car. From the outset, it is designed as an autonomous vehicle and therefore does not have a manual steering system. Future production will be concentrated at GM's Detroit-Hamtramck plant; For now, the vehicle is being tested on the streets of San Francisco. Analyst Ryan Brinkman sees steady growth in his COMMENTS on GM for J.P. Morgan. Global production of GM 4Q20 light vehicles followed +16% year-on-year, solidly better than expected already in mid-October... GM's trend in production in 4Q was stronger than Ford, due to the non-repetition of the UAW strike negatively affecting both 3Q and 4Q 2019... Production of 4Q20 GM outside North and South America was significantly better than expected in mid-October due to a strong recovery in sales in China, Brinkman commented. To that end, Brinkman rates GM shares overweight (i.e. Buy) and its annual price target of \$63 indicates its confidence in 21% growth potential. Overall, GM has built its consensusal Strong Buy rating on a solid performance that has attracted 12 buy ratings in the past three months, as opposed to just 1 Hold. This stock sells for \$52.04 and the average price target of \$55.50 means an increase of ~7%. (See analysis of genetically modified stocks on TipRanks) To find good ideas for trading automated stocks at attractive valuations, visit TipRanks' Best Stock to Buy, a newly adopted tool that brings together all TipRanks stock reports. Disclaimer: The views expressed in this article are solely those of the recommended analyst. Content is for informational purposes only. Before making any investment, it is very important to do your own analysis. Top news and what to watch in the markets on Tuesday, January 26, 2021.Genuine 1956 Porsche 356A Speedster for sale USD 75,000. We supply all over the world. For more information, please contact us now. Thanks. Investor DailyRaytheon beat Q4 estimates and predicted a rise in shareholder returns, but provided mixed guidance for 2021. Johnson &amp; Johnson said on Tuesday that it expects to announce eagerly awaited data on its COVID-19 vaccine early next week and to be able to meet its goal of delivering benefits to countries with which it has signed supply agreements. Public health officials are increasingly counting on single-dose options such as tested by J&amp;J to simplify and increase vaccinations due to complications and slower introduction of permitted vaccines from Pfizer Inc and Moderna Inc, which require second shots weeks after the first. The company forecast earnings in 2021 well above Wall Street estimates, and its shares rose 3.4 percent to \$171.55. Short-seller Andrew Left doesn't usually smile. Left, who has built a reputation for targeting companies he thinks are overvalued, is as confident as ever that video game retailer GameStop is a dying business whose share price will one day plummet. GameStop did not immediately respond to Reuters' request for comment. Comment.
